DETAILED ACTION

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-11 and 14, drawn to a lithographic apparatus and corresponding method of using the apparatus, classified in class 355, subclass 67.
 - II. Claims 12 and 13, drawn to calibration method, classified in class 359, subclass 223.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the calibration method could be practiced by an apparatus that does not have a projection system that projects the patterned beam onto a target portion of the substrate. In other words, the method could be practiced by a calibration apparatus that simply records the disturbance of one other individually controllable element after a known control signal is applied to a first individually controllable element.

Art Unit: 2851

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
